

TAB FusionRMS for Finance

Providing the mortgage industry and loan operations centers with pinpoint accuracy in managing critical loan files & documents.

TAB brings years of experience delivering process excellence in the mortgage market to support hundreds of customers including originators, servicers, and document custodians. We see a common trend toward accelerating business processes using technology and digital strategies but what remains top of mind for customers is having pinpoint accuracy in managing and locating critical documents.

FusionRMS manages millions of mortgage loans with lightning fast speed to provide total document control and chain of custody tracking across the life of a loan. In working closely with many of the top leaders in the market we have developed FusionRMS into a cutting-edge technology to deliver peace of mind by experts at TAB.

Why is the right technology critical?

- Accuracy and confidentiality of loan documents
- Maintain document integrity and security
- Loan Pool, Portfolio, and Inventory Management
- Exception processing and loan completeness
- Create a system of record to audit chain of custody
- Integration between LOS and other technologies

Having the right technology lowers the cost of managing loan and removes risk associated with lost documents.
