# Pickup & Drop off Smart Lockers

## Flexible

Lockers can be designed and configured for your unique needs. Design for your specific application, indoor or outdoor with metal, laminate or phenolic – include custom graphics, alternative materials or biophilic design. Configure the lockers to function exactly how you like and as your needs change, so can the lockers.

## Design

With wired, networked smart locks there are no locks mounted to the doors – creating a unique design aesthetic and user experience for any environment.

## Scalable

Planning for the perfect design can be challenging. Smart lockers allow you to take a test and learn approach. Smart locker data can help inform how lockers are being used. Your smart experts are here to help you scale and/or to create an ideal solution.

# Workplace Applications

When employees work remotely, it becomes much more difficult to coordinate the exchange of equipment or confidential information. Smart lockers can allow for employees to easily drop-off or pick-up materials the next time they are in the office without needing to coordinate schedules. Exchange of goods lockers create a productive and streamlined employee experience.

## IT Equipment

Smart lockers are a great way for IT to coordinate equipment exchanges when employees start or leave the company, as well as loaner solutions for times when equipment breaks down. Smart lockers allow IT to manage their equipment exchange process by preloading the lockers with computer equipment without needing anyone from IT present on-site at all times and/or allowing employees to drop-off their equipment that needs to be repaired or returned to IT.

# Parcel Package

Smart lockers provide an easy and secure solution for parcel package exchange. With a simple to use interface, and ability to integrate with third party software, our smart lockers make parcel exchange straightforward and accessible, offering a dependable solution to all your package handling needs.

## Confidential Information

Smart Lockers facilitate convenient and secure exchange of confidential information in the hybrid work model, eliminating the need to coordinate schedules. These lockers act as a central point for drop-off and pick-up, ensuring that sensitive documents and materials can be securely stored and accessed by authorized individuals. Lockers can be designed with mail slots for easy drop-off or allocate specific lockers in a locker bank for the exchange of materials.

# University Applications

## Library Materials

Smart Lockers have modernized book and tech equipment borrowing in academic libraries. Students simply select materials via the library's online service. Once the librarian places the selected items in a locker, the student receives a notification. Using their student ID card or mobile device, they can quickly and securely scan, open the locker, and retrieve their items.

## Parcel Package

Smart lockers provide an easy and secure solution for parcel package exchange. With a simple to use interface, and ability to integrate with third party software, our smart lockers make parcel exchange straightforward and accessible, offering a dependable solution to all your package handling needs.

## Pickup Lockers

Smart Lockers provide a practical and efficient solution for the pickup of common goods in everyday life. From living essentials and school store purchases to food pick-up, these lockers offer a secure storage place until you are ready to retrieve your items.

## Back-Loading Lockers

Staff can deliver right from the touch display or by creating a label in the software at their workstation and scanning it at the barcode at the locker bank. Staff can deposit multiple packages/items in the lockers at the same time, making for a quick and easy delivery.

## Front Pickup Lockers

Users are notified via email and can retrieve their package/item(s) with their RFID card or other allocated credential from the front side.

# Pass-Through Design

Smart Lockers efficiently facilitate the exchange of goods, with a unique design allowing items to be loaded from the back and picked up from the front side by users. This layout ensures a streamlined, secure, and user-friendly experience – offering contact-free pick-ups and optimizing space.

# Audit Trails

Delivery software creates a full chain of custody to establish seamless accountability throughout the entire delivery or exchange journey.

# Convenience

Lockers provide users access to retrieve their packages and mail when convenient for them.

# Future-Proofed

Networked, smart lockers are a flexible solution that easily changes and adapts as your needs change.
